# Claude Skills.

I# Import Anthropic's Official Skills

Clone the official skills repo and copy all skill directories into this project's `.claude/skills/` folder.

Command

```bash
git clone --depth 1 https://github.com/anthropics/skills.git /tmp/anthropic-skills && \
mkdir -p .claude/skills && \
cp -r /tmp/anthropic-skills/skills/*/ .claude/skills/ && \
rm -rf /tmp/anthropic-skills
```

What This Does

1. Clones Anthropic's skills repo to a temp location

2. Creates `.claude/skills/` if it doesn't exist

3. Copies each skill as its own folder (xlsx, pptx, docx, pdf, etc.)

4. Cleans up the temp clone

Included Skills

- **xlsx** - Excel/spreadsheet manipulation

- **pptx** - PowerPoint/presentation creation

- **docx** - Word document generation

- **pdf** - PDF processing and creation

These are the same skills Claude Code uses internally.

Usage

Paste this entire file into Claude Code and say "run this" — or execute the command yourself.
